

MARIPROject

MARIPROject for SAP Business One

Complete Solution for Project-oriented Companies

Small and midsize businesses in
service & construction industries

Economic Projects Thanks to Consistent Data

Project software with costing, planning, resource management,
time recording, invoicing, service functions & analytics

MARIPROject helps you to calculate projects economically, process them uniformly and evaluate them up to the current day without losing time through data transfer to other systems.

You can run MARIPROject either on your own server (On Premise) or in the cloud (On Demand). HANA enables fast access to large amounts of data. You can access your data at any time via web or app.

SAP Business One provides you with a clear view of your company. In addition, MARIPROject provides relevant evaluations of current planning, costs and revenues for each individual project with just one click.

Customer Statement

"With help of the solution, we have access to up-to-the minute business data. This means that the managers have always a complete view of the current status of ongoing projects."

Friedrich Hörauf

Managing Director, GCA projektmanagement + consulting gmbh
Germany

Customer Statement

"We felt very comfortable working with local SAP Business One channel partners Aztalan and MARINGO. We are also sure that our future is in safe hands with a SAP solution."

Peter Bresseleers

Founder and CEO, INDEFF
Luxembourg

Integration with Applications on SAP HANA®

MARIProject, Project Management for SAP Business One.

Project Costing

MARIProject enables an easy calculation of projects, because the data is merged from CRM, procurement and project planning. You can define different methods for quotation costing.

Project Controlling

Since all data is available in one system, you have always up-to-date reports at any time. This allows you to quickly find out whether your projects are successful, i.e. whether they are on time and on budget.

Resource Planning

The software helps you plan all resources (employees, resource pools, items, equipment) in a consistent way. While scheduling in the Gantt Chart, the cost planning is automatically carried out in the background on the basis of stored data. The availability displays also shows whether the resources are planned in other projects.

Project Invoicing

You can use all common types of billing: invoicing at cost or fixed price, milestone or due date; even project-related commissions are possible. Invoicing is carried out automatically on the basis of the recorded and approved data.

Tracking of Working Hours and Travel Expenses

MARIProject supports different possibilities of time and travel expenses recording, by the employees themselves or in the back office by authorised users. Once data has been entered, it is immediately available for invoicing or reports.

Service Functions

MARIProject is delivered with practical modules for customer service and marketing:

- The **Support Desk** for processing software support tickets.
- The **Service-Module** for the maintenance and repair of products and systems.
- With the **Newsletter-Module** you can select business partners from SAP Business One and write them specifically.
- The **Event-Module** supports you in managing your in-house events.

Purchasing & Warehousing

MARIProject supports project-related purchase processes from the request for quote to the selection of the most economic items or vendors. With the balance statistics, you can keep track of the current delivery status of every item throughout the entire the project.

SAP Business One enables you to manage one or more warehouses. With MARIProject, you can also manage specific project-related warehouses.

SAP Business One

MARIProject is fully integrated in the ERP software SAP Business One.

With SAP Business One, you can manage and simplify business processes throughout the entire organisation: accounting, sales, purchasing, warehousing & logistics. You can react faster to new developments in the market and grow your business safely.

SAP Business One has been designed specifically for small and midsize businesses.

MARIProject pays off quickly:

Time-saving

No multiples entries, automates processes

Cost-efficient

Clear license model, fast implementation, live update

Future-proof

SAP Business One is the ERP solution for midsize companies from SAP, the global leader in business software. SAP Business One and MARIProject are constantly being further developed.
